Maksym, Python Backend Developer

Bulgaria, Varna

Github LinkedIn

About me

Python Backend Developer with commercial experience in developing and maintaining Python-based services, asynchronous data processing systems, and API integrations. Skilled in building reliable backend solutions using Python, FastAPI, Django, PostgreSQL, and Docker. Experienced in concurrent programming, database operations, automated testing, and integrating AI/LLM functionality into backend applications.

My education

MATE ACADEMY / 2024

Python developer

TULCHYN PROFESSIONAL COLLEGE / 2019 - 2023

Veterinary Medicine

Languages

Ukraine — Native proficiency

English — Strong Intermediate

Past Experience

Rozetka NOV 2025 - SEP 2026

Backend Services & Data Processing & AI

• Developed and maintained high-load Python services for automated data collection, processing, and integration with external sources.
• Designed and improved data processing pipelines to support product pricing and matching functionality.
• Developed product matching algorithms and integrated LLM-based solutions for complex matching scenarios.
• Optimized application performance and resource utilization using asyncio, multithreading, and multiprocessing.
• Improved reliability and scalability of Python services handling large volumes of product data.

Ajax Systems JUL 2024 / NOV 2025

Python Developer in Test

• Developed and maintained mock gRPC services to support integration testing of distributed system components.
• Designed and automated Unit, Integration, and E2E tests in Python, improving test coverage and reliability of critical functionality.
• Integrated automated tests into CI/CD pipelines and improved test code quality using mocking, linting, and code review practices.
• Mentored two team members and supported their onboarding and technical development.

Technologies

Backend: Python, FastAPI, Django, Django REST Framework, REST API, SQLAlchemy, Pydantic, gRPC
Databases & Caching: PostgreSQL, Redis, ClickHouse, pgvector
Concurrency: asyncio, aiohttp, HTTPX, Multithreading, Multiprocessing
Infrastructure: Docker, Docker Compose, Linux, Git, CI/CD, Swagger/OpenAPI
Testing: pytest, unittest, Mocking, Unit & Integration Testing
AI / LLM: OpenAI API, LangGraph, RAG, Embeddings, Vector Search
Additional: Selenium, Playwright, Scrapy, BeautifulSoup, lxml
